

Engineering

Engineering refers to the process of designing and developing a device, assembly, or system such that it be produced as an item for sale through some production manufacturing process.

Product engineering usually entails activity dealing with issues of cost, producibility, quality, performance, reliability, serviceability, intended lifespan and user features. These product characteristics are generally all sought in the attempt to make the resulting product attractive to its intended market and a successful contributor to the business of the organization that intends to offer the product to that market. .
